# CHECKWEIGHING

High returns PLUS eliminate risk of hefty fines

Times are tough so it's **NOW** you should be asking these questions:

How much product do you give away each month just "to be sure"?

Are you risking \$100,000+ fines with underweight products?

Can you produce realtime weight reports for key customers?

## DOLPHIN Checkweigher

from A&D - Australia's largest scale manufacturer

A&D's **DOLPHIN** is just like it's aquatic namesake; highly intelligent and right at home in the harshest environments. Best of all it's locally made so it can be built to suit you rather than you adapting to fit an imported brand. Any application - high speed, high capacity, extreme conditions, unusual shapes & sizes - don't worry, we've seen it all!

Water & dust proof versions start from as low as **\$16,000\***.

Can you afford not to consider a local turnkey solution that provides productivity gains and reduces the risk of big fines?

## MULTIWEIGH Software

Whether it's to improve operator efficiency or create detailed reports for your customers, the processing and utilisation of data is a common challenge. A&D's MULTIWEIGH is ideal for weight data processing & management. From as little as **\$2995\***, you can collect and analyse data from "comms ready" weighing devices - not just A&D products but other popular brands as well. MULTIWEIGH can connect to 20 checkweighers & 200 scales via a variety of wired or wireless comms - now that is powerful!

### Real-time data capture and analysis
